HEATSTRIP · ACCESSORY SHEET

Design 300 mm extension

The extension kit lowers the heater below its support to place the radiant heat at the useful height for your seating area.

Reference	THHAC-005
Drop length	300 mm
Compatible family	Design Classic - THH series
Material	316 stainless steel
Kit weight	2 kg

Compatibility

Design Classic: 1500, 2400 and 3200 W

HEATSTRIP · THHAC-005

Preparing and using this accessory

Calculate the final height

This reference has 300 mm rods. Allow for the height of the support, extension, bracket and heater to position the heater at its useful mounting height.

Assemble the connections

Fix the kit to the load-bearing structure with suitable anchors. Attach the rods and connecting pieces to the corresponding heater brackets, adjust the direction and lock the assemblies.

Check that the fixings are secure and the cable route is clear. The extensions lower the heater; the minimum clearances to nearby materials remain those specified for the heater.

Kit contents

The kit includes the rods, connecting pieces and fasteners for connecting to the heater. Select ceiling anchors to suit the supporting structure.

Maintain a stable mounting

Check the fastenings and connections regularly. Before any adjustment or cleaning, disconnect the heater's power supply and allow it to cool.
